

## **Main feature of the TPCL Version:**

### 1. Printer built-in barcode fonts

TEC printers have internal support for many different bar code symbologies including 2D codes. Most Windows applications are unable to access these bar codes directly. However, the TPCL driver supports print by built-in barcode fonts, and then these built-in barcode fonts will be listed and can be selected within any Windows application that supports printer fonts.

### 2. Printer built-in character fonts

The TPCL driver supports print by built-in character fonts, and then these built-in character fonts will be listed and can be selected within any Windows application that supports printer fonts. These built-in character fonts allow you to print labels more quickly.

### 3. Image compression

This option allow you to print labels more quickly.

### 4. Label stock

When you need to specify a label stock size different from the existing label stock sizes, you can either create a new label stock size or edit an existing one.

Note: TPCL is abbreviation of TEC Printer Command Language.
